

ABSTRACT

A sintered body for thermistor device comprising:  
at least one element selected from elements of group 3 in a  
periodic table proviso that La is excluded; at least one element  
selected from elements of group 2 in a periodic table; Mn; Al;  
and oxygen, and being substantially free from any transition  
metal other than Mn and the at least one element selected from  
elements of group 3 in the periodic table.
